

AFREP

Air Force Repair Enhancement Program (AFREP)

The AFREP's main objective is to "Optimize Air Force resources by increasing the wing and base-level repair capability of aerospace parts and equipment. The program encourages innovation, ingenuity and resourcefulness by allowing organizations to identify items for base level or contract repair." Put simply, AFREP saves Air Force resources and American tax dollars by repairing items that are no longer available through normal channels, no longer made, or are to be thrown away.

TMA Dedicated AFREP Resources

TMA is committed to finding solutions for our customers' repair needs. Our highly skilled AFREP TEAM of Engineers, Electronics and Assembly Technicians, Parts Obsolescence Specialists and Logisticians, have achieved a program success rate of over 80%. This means it is highly likely that you WILL find your repair solution at TMA. With short lead times and rates at or well below 30% of Published FedLog pricing, TMA can enhance your savings opportunities as well.
